

Pennant Software Services' Oracle Capability

Pennant Software Services has a proven track record of Oracle development, spanning over 15 years work with Oracle OLTP (online transaction processing) products and services, creating and maintaining a number of highly complex COTS and bespoke products for a worldwide customer base.

We are now making this world class expertise and experience available to a much broader market – we are available to work on projects ranging from bespoke database development to Oracle maintenance activities (we employ a number of ex-Oracle support staff).

We are experts in the following areas:

- Oracle Databases (versions 11g, 10g, 9i, 8i, 8 and 7)
- Oracle Web Server – configuration and customisation (versions 10g, 9i iAS, & 9i OAS)
- Oracle SQL & PL/SQL languages (versions 11g, 10g, 9i, 8i, 8 & 7)
- Oracle Forms – creates a GUI front end for your product (versions 11g, 10g, & 6i, client/server and web based)
- Oracle DBA activities, including but not limited to configuration, migration, backup and recovery of all of the above Oracle software
- Project & Development analysis

We can also host your project solutions, as we have the capability to provide full management and support as a SaaS (Software as a Service) site.

In addition, we can help you maintain and migrate older Oracle solutions to increase the longevity in today's rapidly changing IT environments.

If you have a requirement for any Oracle work, then we look forward to your call:
